

Access-IP OpenAttendant

Supplementary information

Telephony & cordless

OpenAttendant is an internal auto attendant system with freely programmable, interactive menu structure and actions. It is a system that can be activated whenever necessary to suit the user's demands.

The OpenAttendant has the same flash media as is used for OpenVoice and it shares speech channels with OpenVoice. It is an alternative to a traditional switchboard and offers information and announcement services, with five virtual switchboards where you can define the menus freely.

The OpenAttendant also allows users to restrict some users from having access into certain areas through the use of passwords, and has automatic interactive caller prompting via the telephone keypad. The application also provides announcement texts and music on hold functionality.

Key functions

- Internal attendant system
- Announcement texts
- Music on hold function
- Five virtual switch boards
- Shares speech channels with OpenVoice
- Define menus freely
