

# CH7010 DECT handset

Supplementary information  
Telephony & cordless

**The CH7010 DECT handset has been designed with healthcare and care homes in mind. As well as being splash proof, you can clean it with disinfectant without damaging the handset, so it does not spread bacteria from one person to another. These excellent key features allow staff to safely communicate while mobile.**

Being able to manage on the move is essential in today's environment. Receiving and making calls while mobile enhances communication with patients, residents and staff, improving efficiency, responsiveness, productivity and day-to-day management.

The CH7010 DECT handset is ideal for non-medical staff within healthcare environments and care homes. As well as being able to make and receive telephone calls, send and receive text messages and access voicemail, the handset displays alarm icons that can be used with nurse call systems and patient and equipment monitoring, showing staff clearly what alert notifications have been raised (depending on application).

Within healthcare environments it is important to minimise the spread of bacteria from one person to another. The CH7010 has been designed so that it can be wiped with disinfectant without damaging keys, the case or leaking inside the handset. This helps prevent the transfer of bacteria, enabling staff to move freely around the building without worrying about where the handset has been. Where staff work on more than one site, the CH7010 can be registered on up to 15 sites so staff can be truly mobile around all parts of the organisation.

## CH7010 features

The CH7010 has a modern, attractive design and is rich in features, including:

- IP54 approved - splash and dust proof
