

DECT accessories

Supplementary information
Telephony & cordless

Multitone holsters are designed to protect your DECT handset against accidental damage. As a result you can remain mobile around the workplace without losing your handset and repair costs are reduced.

CH72 and CH74 handset standard holster

The holster designed for the CH72 and CH74 DECT handset has elastic sides enabling the handset to fit securely. There are three types of clips available:

- spring belt clip - designed to clip over a belt or pocket
- detachable swivel belt clip - swivels if the user sits down preventing the handset pressing into the body. This clip makes removal and replacement of the handset very easy
- belt clip - fastens around the belt using poppers the handset is truly secure

CH76-IS rubber holster

The rubber holster is rugged and designed for optimum protection. The case fits around the handset but still enables full functionality and operability. The holster is designed specifically for the Intrinsically Safe handset, so if users are operating in a noisy environment, a headset can be easily added providing an easy way for you to adapt to your environment.

This holster has a spring belt clip for quick and easy attachment or removal.

CH78 holster

The CH78 holster secures the handset in place using poppers at the bottom of the holster. This makes for easy charging, as the handset doesn't need to be removed from the holster; simply unfasten and place in charger. It provides all the protection of a standard holster and has a detachable swivel belt clip making it easy to view the phone when attached to your person.

Pocket holster

Multitone's pocket holster is suitable for the CH78, CH2010, CH6020, CH6040, CH7010, CH7020, CH7040, 142d, 610d, 620d and 630d DECT handsets. The handset simply slips into the pocket and can be attached to the user via three different belt clips:

- spring belt clip - clips over a belt or pocket
- detachable swivel belt clip - swivels preventing restriction if the user is on the move or sits down
- belt clip - secures around the belt

Headsets

We have a range of headsets that can be used with our range of desk and DECT handsets. With a headset you are truly able to communicate while you work, as you are completely hands free.

The benefits of using a headset are:

- reduction in hang-up time
- fewer data input errors - both hands are free to enter information
- decrease in body stress and tension
- improved productivity
- increased efficiency
- customer response times increase

What is the best headset for you?

Over-head

In environments where staff are constantly answering the phone and customers expect a fast response, an over-head headset is the ideal option. As soon as a call is answered, staff can talk to customers straight away with no fumbling for the handset or receiver.

Ear defender

Where staff work in noisy industrial environments and manual work is a key part of everyday life, Bluetooth headset ear defenders are the optimal solution. Loud sounds in a surrounding environment are blocked out or muted so that staff are able to clearly hear colleagues and communicate effectively and efficiently.

In-ear

In-ear headsets are also available for anyone who wants to make and answer calls instantly, whether staff are mobile around the building or at their desk.
