

# Multitone Electronics plc

## Overview

**For more than 75 years Multitone has provided systems to deliver critical messages to mobile workers. In many instances, Multitone's products are used in life- and mission-critical situations, such as medical emergencies, fire brigade alerting and industrial emergency response teams, and our clients around the world have come to trust and rely on our resilient and reliable solutions.**

Based in Basingstoke, UK, with more than 200 employees worldwide and over 50 professional global resale partners, Multitone is acknowledged as world leader in the design and implementation of wireless messaging systems.

### Paging

Multitone's paging solutions range from small systems with a few pagers to major installations supporting up to 5,000 users. Many of our paging solutions are interfaced to other systems such as nurse call, building management and fire detection, to provide automatic notification of events to relevant staff.

Our range of pagers is designed to receive messages either on a specific site or over a wider area. Messages may be numeric, alphanumeric or voice, or a combination depending on specific customer requirements.

Multitone's paging solutions are widely used within healthcare, emergency services, petrochemicals and hospitality markets.

### Benefit from Multitone solutions

- Manage on the move - walk and talk
- Multiple alarm and text messaging
- Employee protection
- Alarm management
- Save time and money by being available
- Integrate communication solutions with existing systems/devices
- Improve business efficiency

## Wireless telephony

Multitone provides a range of wireless telephony servers, which connect to a host telephone system via analogue, digital and IP interfaces, providing true wireless PABX functionality throughout the organisation.

Depending on the system, Multitone's wireless telephony solutions can support up to 4000 users and 256 base stations, meaning that even large sites can be covered. By incorporating Multitone's Access Integrator messaging interface, third party products such as nurse call, building management and fire detection systems may be interfaced to the wireless server, enabling automatic notification of events to key staff.

Multitone's wireless telephony solutions are in use in industries including nursing, retail, hospitality and manufacturing.

## EkoTek™

Multitone's EkoTek™ solution provides a unique 2-way radio backbone, which enables users to initiate messages in emergency situations, locating the user with a high degree of accuracy.

The radio network is provided by a series of intelligent, low power 2-way radio repeaters that are battery powered, meaning that the network can be installed rapidly and cost effectively. Options are available for a solar-powered repeater for installation in outdoor applications.

EkoTek™ offers a range of mobile devices, which allows users to initiate emergency calls and also to receive and acknowledge messages from other devices, or the system's integrated messaging application.

EkoTek™ is ideally suited to providing solutions for users who work in high risk environments, such as psychiatric medicine, drug rehabilitation and hospital trauma centres, as well as protecting workers in industrial, retail or public service situations where lone working is required.
